

1st Phase of New Estuary Landscaping

A large, textured orange watercolor splash shape on the left side of the slide, with various shades of orange and some darker spots.

Front Entrance

- The sides and the back of the circle will be done in Phase Two
- This was done partly to avoid planting trees in Hurricane Season and partly to have more time to fine tune the design.

Green Island Ficus will go back the wall, eliminating the red lava stone.
This is a simple, clean look . There will be lots of color on the sides.

The Estuary

Delray Beach, FL

Conceptual Rendering-Plants are depicted at mature stage

Guard House #2

Conceptual Rendering-Plants are depicted at mature stage

Existing

Landscape Design Suggestions

Green Island Ficus
Aechmea tayloriensis
Dipladenia (in ceramic pot)
Confederate Jasmine (wire trellis)

The Circles

- All three circles will have the same landscaping
- The boulders will be cleaned and replaced.
- The Palm Trees on each island will remain
- It is anticipated that there will some modifications to the islands once they have been planted and we can see what they need.
- The Jasmine Minima will tolerate the tires occasionally running over them.
